Introduction

With approvals for new drugs at near-historic lows, biomanufacturers must exploit every opportunity to create value while improving the bottom line.

By lowering unit costs and conserving capacity, advanced manufacturing techniques offer biofirms the best opportunity for gaining competitive operational efficiencies.

This symposium will give delegates first-hand information from experts who have already successfully navigated from concept to product, including sessions on:

- **Facility Management to Ensure Maximum Utilisation**
 - **Mammalian Cell Culture Processes for Large Scale Operation - from DNA to Product**
 - **Streamlining Production of Antibody Fragments by Selecting the Most Appropriate Fully Human and Highly Stable Proteins**
 - **Creating Added Value in Contract Biomanufacturing through Partnership**
 - **Implementation and Validation of a Fully Disposable Commercial Process for Vaccine Manufacture**
-

Recognising that partnerships and alliances are vital to the health of both large and small biotech firms, a one-day symposium on 'Doing the Deal' is also offered. Presentations on direct experience and insights into what makes partnerships and collaborations a success, including:

- **How to Get a Win-Win Deal**
 - **Between In-Licensing, Clinical Development and Partnering - the Story of Antibody cG250**
 - **New European Medicines Legislation: Who Came Out Ahead - Innovators or Generics?**
-

BioConferences is very aware of the needs of sponsoring and exhibiting companies to receive the maximum benefit and profile from their expenditure, so a range of promotion options is offered, including:

- **Sponsorships at a wide range of levels**
- **Exhibiting**
- **Advertising in the Meeting Program Book**

Information on all of these is included here. We look forward to welcoming you in November, and working with you to finalise the type of presence you would prefer at the Symposium.
